Watanabe T., Song Y., Hirayama Y., Tamatani T., Kuida K., Miyasaka "Sequence and expression of a rat cDNA for LECAM-1.";

"Sequence and expression of a rat cDNA for LECAM-1.";

Blochim. Biophys. Acta 1131:321-324(1992).

-I- FUNCTION: CELL SURFACE ADHESION PROTEIN. MEDLATE THE ADHERENCE OF LYMPHOCYTES TO ENDOTHELIAL CELLS OF HIGH ENDOTHELIAL VENULES IN PERIPHERAL LYMPH NODES.

-I- SUBCELLULAR LOCATION: Type I membrane protein.
-I- SIMILARITY: TO OTHER SELECTINS/LECAMS.
-I- SIMILARITY: CONTAINS 1 C-TYPE LECTIN FAMILY DOMAIN.
-I- SIMILARITY: CONTAINS 1 SGF-LIKE DOMAIN.
-I- SIMILARITY: CONTAINS 2 SUSHI (SCR) DOMAINS.

A Strubel N.A., Nguyen M., Kansas G.S., Tedder T.F., Bischoff J.;

A TISOLAtion and characterization of a bovine cDNA encoding a functional homolog of human P-selectin.

Eliochem. Biophys. Res. Commun. 192:338-344(1993).

C -!- FUNCTION: CA(2+)-DEPENDENT RECEPTOR FOR MYELOID CELLS THAT BINDS CONTROL TO CARBOHYDRATES ON NEUTROPHILS AND MONOCYTES. MEDLATES THE TO CARBOHYDRATES ON NEUTROPHILS AND MONOCYTES MEDIATELETS WITH LEUKOCYTES. THE LIGAND RECOGNIZED IS SIALYL-LEWIS X.

C -!- SUBCELLULAR LOCATION: Type I membrane protein.

C -!- SUBCELLULAR LOCATION: Type I membrane protein.

C -!- SUBCELLULAR LOCATION: Type I membrane protein.

C -!- TISSUE SPECIFICITY: STORED IN THE ALPHA-GRANULES OF PLATELETS AND WEIBEL-PALADE BODIES OF ENDOTHELIAL CELLS. UPON CELL AND WEIBEL-PALADE BODIES OF ENDOTHELIAL CELLS. UPON CELL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

      C --- FUNCTION: EXPRESSED ON CYTOKINE INDUCED ENDOTHELIAL CELLS AND MEDIATES THEIR BINDING TO LEUKOCYTES. THE LIGAND RECOGNIZED BY ELAM-1 IS SIALYL-LEWIS X (ALPHA(1-3)FUCOSYLATED DERIVATIVES OF POLYCACTOSAMINE THAT ARE FOUND AT THE NONREDUCING TERMINI OF C POLYCACTOS INVOLVED IN CAPILLARY MORPHOGENESIS BY BINDING TO A CONTINE CAPILLARY ENDOTHELIAL (BCE) CELL SIALYL LEWIS-X AND/OR SIALYL LEWIS A-CONTAINING LIGAND (PROBABLY).

C SUBCELLULAR LOCATION: Type I membrane protein.

C SIMILARITY: CONTAINS 1 EXECTIN FAMILY DOMAIN.

C SIMILARITY: CONTAINS 1 EGF-LIKE DOMAIN.

C SIMILARITY: CONTAINS 4 SUSHI (SCR) DOMAINS; BOVINE E-LECTIN LACKS

THE HUMAN SUSHI-4 AND 5 EQUIVALENTS.

MO1. Genet. 7:1277-1284(1998).
FUNCTION: CA(2+)-DEPENDENT RECEPTOR FOR MYELOID CELLS THAT BIT TO CARBOHYDRATES ON NEUTROPHILS AND MONOCYTES. MEDIATES THE INTERACTION OF ACTIVATED ENDOTHELIAL CELLS OR PLATELETS WITH LEUKOCYTES. THE LIGAND RECOGNIZED IS SIALYL-LEWIS X.
SUBCCITLOUAR LOCATION: Type I membrane protein.
SUBCCILCULAR LOCATION: Type I membrane PROTEIN.
TISSUE SPECIFICITY: STREED IN THE ALPHA-GRANULES OF PLATELETS AND WEIBEL-PALADE BODIES OF ENDOTHELIAL CELLS. UPON CELL ACTIVATION BY AGONISTS, P-SELECTIN IS TRANSPORTED RAPIDLY TO
                                                                                                                                                                                                                                                                                                                                                                                                                                                s SWISS-PROT entry is copyright. -I FUNCTION: PLAYS AN IMPORTANT ROLE IN ACUTE CELLULAR. REJECTION AND PROBABLY ALSO IN XENOGRAFT REJECTION.
-I SUBCELLULAR LOCATION: Type I membrane protein.
-I SIMILARITY: TO OTHER SELECTINS/LECAMS.
-I SIMILARITY: CONTAINS 1 C-TYPE LECTIN FAMILY DOMAIN.
-I SIMILARITY: CONTAINS 1 EGF-LIKE DOMAIN.
-I SIMILARITY: CONTAINS 4 SUSHI (SCR) DOMAINS; PORCINE THE HUMAN SUSHI-1 AND -4 EQUIVALENTS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           DOMAIN

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Weller A., Isenmann S., Vestweber D.;

"Cloning of the mouse endothelial selectins. Expression of both E-
rand P-selectin is inducible by tumor necrosis factor alpha.";

L. J. Biol. Chem. 267:15176-15183(1992).

- FUNCTION: EXPRESSED ON CYTOKINE INDUCED ENDOTHELIAL CELLS AND

C. HEDIATES THEIR BINDING TO LEUKOCYTES. THE LIGAND RECOGNIZED BY

ELAM-1 IS SIALYL-LEWIS X (ALPHA(1->3)FUCOSYLATED DERLYATIVES OF

C. POLYLACTOSAMINE THAT ARE FOUND AT THE NONREDUCING TERMINI OF

C. GLYCOLIPIDS).

C. SUBCELLULAR LOCATION: Type I membrane protein.

C. SUBCELLULAR INCATION: Type I membrane protein.

C. SIMILARITY: CONTAINS 1 CTYPE LECTIN FAMILY DOMAIN.

C. SIMILARITY: CONTAINS 1 EGF-LIKE DOMAIN.

C. SIMILARITY: CONTAINS 5 SUSHI (SCR) DOMAINS.

SUBCELLULAR LOCATION: Type I membrane protein.

SUBCELLULAR LOCATION: Type I membrane protein.

IN SIGNILANEOUS: CRDS 1-3 HAVE AT MOST VERY WEAK AFFINITY FOR CARBOHYDRATE. CRD 4 SHOWS THE HIGHEST AFFINITY BINDING AND HAS MULTISPECIFICITY FOR A VERIETY OF MONOSACCHARIDES. AT LEAST 3 CRD (4, 5, AND 7) ARE REQUIRED FOR HIGH AFFINITY BINDING AND ENDOCYTOSIS OF MULTIVALENT GLYCOCONJUGATES.

SIMILARITY: CONTAINS 8 C-TYPE LECTIN FOMAINS.

SIMILARITY: CONTAINS 8 C-TYPE LECTIN DOMAINS.

SIMILARITY: CONTAINS 1 RICIN B-TYPE LECTIN DOMAIN.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               TWO receptor genes during evolution.";

OC. Natl. Acad. Sci. U.S.A. 82:6465-6469(1985).

FUNCTION: MEDIATES THE ENDOCYTOSIS OF PLASMA GLYCOPROTEINS TO WHICH THE TERMINAL SIALIC ACID RESIDUE ON THEIR COMPLEX CARBOHYDRATE MOIETIES HAS BEEN REMOVED. THE RECEPTOR RECOGNIZES TERMINAL GALACTOSE AND N-ACETYLGALACTOSEAME UNITS. AFTER LIGAND BINDING TO THE RECEPTOR, THE RESULTING COMPLEX IS INTERNALIZED AN TRANSPORTED TO A SORTING ORGANELLE, WHERE RECEPTOR AND LIGAND ARE CHESSASSOCIATED. THE RECEPTOR THEN RETURNS TO THE CELL MEMBRANE CHESSASSOCIATED.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                61

Primary structure of the rat liver asialoglycoprotein receptor.
Structural evidence for multiple polypeptide species.";
J. Biol. Chem. 259:770-778(1984).
-i- FUNCTION: MEDIATES THE ENDOCYTOSIS OF PLASMA GLYCOPROTEINS TO
WHICH THE TERMINAL SIALIC ACID RESIDUE ON THEIR COMPLEX
CARBOHYDRATE MOIETLES HAS BEEN REMOYED. THE RECEPTOR RECOGNIZES
TERMINAL GALACTOSE AND N-ACETYLGALACTOSAMINE UNITS. AFTER LIGAND
BINDING TO THE RECEPTOR, THE RESULTING COMPLEX IS INTERNALIZED AND
TRANSPORTED TO A SORTING ORGANELLE, WHERE RECEPTOR AND LIGAND ARE
DISASSOCIATED. THE RECEPTOR THEN RETURNS TO THE CELL MEMBRANE

SUBCELLULAR LOCATION: Type II membrane protein.

ALTERNATIVE PRODUCTS: 3 ISOFORMS; A (SHOWN HERE), B AND C; ARE PRODUCED BY ALTERNATIVE SPLICING.

PTM: N- AND O-GLYCOSYLATED (BY SIMILARITY).

MISCELLANEOUS: THERE ARE TWO KINDS OF FC RECEPTORS FOR IGE, WHICH DIFFER IN BOTH STRUCTURE AND FUNCTION: HIGH AFFINITY RECEPTORS ON DASOPHILS AND MAST CELLS AND LOW AFFINITY RECEPTORS ON LYMPHOCYTES
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       SIMILARITY: CONTAINS 1 C-TYPE LECTIN FAMILY
